Course Description

This course introduces students to the principles and practice of computer and internet forensics. Students will explore issues related to security of computer systems, accessing and analyzing data, reconstructing events, surveillance, intrusion prevention, intrusion detection, and recovery from breaches. This course is particularly aimed at students who have a strong interest in computer and information security.

Topics include:

- Forensically examining the state of desktop / mobile computer(s) left behind by an presumed offender to determine what happened.
