Course Description

The course is an introduction to secure e-commerce, focusing on the principles and concepts related to computer-based, electronic transactions.

This course provides practical examples of how the security theories are applied in the digital world.

Students will learn to effectively explain the key technical aspects of e-commerce application security. They will become fully aware of the primary threats that e-commerce applications face and will be provided with practical hands-on opportunities to execute various attacks and identify vulnerabilities within the system. Additionally, they will acquire the necessary knowledge and skills to utilize cutting-edge technologies essential for combating these attacks.
